1. Introduction

1.1 Purpose

This Software Requirements Specification (SRS) document outlines the requirements for developing the Neighborhood Service Marketplace — a web-based platform built on the MERN stack (MongoDB, Express.js, React.js, Node.js). The primary goal of this application is to connect local service providers such as electricians, plumbers, cleaners, and painters with customers in their neighborhood. The platform facilitates service discovery, competitive bidding, booking management, and post-service reviews in a secure and efficient manner.

1.2 Scope

The scope of this project includes the design, development, testing, and deployment of the Neighborhood Service Marketplace, catering to:

- Customers who can register, browse providers, post service requests, receive bids, manage bookings, and leave reviews.
- Providers who can register (with admin approval), create service profiles, browse customer requests, submit bids, manage jobs, and build their reputation through ratings.
- Administrators who oversee all user accounts, manage service categories, approve provider registrations, and maintain platform integrity.

This SRS covers the functional and non-functional requirements for the project, constraints, assumptions, high-level architecture, and the development plan following Agile methodology.

1.3 Definitions, Acronyms, and Abbreviations

- MERN: MongoDB, Express.js, React.js, Node.js.

- SRS: Software Requirements Specification.
- FR: Functional Requirement.
- NFR: Non-Functional Requirement.
- JWT: JSON Web Token — used for stateless authentication.
- RBAC: Role-Based Access Control.
- CORS: Cross-Origin Resource Sharing.
- MVC: Model-View-Controller architectural pattern.
- API: Application Programming Interface.
- UI/UX: User Interface / User Experience.

1.4 References

- MongoDB Documentation: <https://www.mongodb.com/docs/>
- Express.js Documentation: <https://expressjs.com/>
- React.js Documentation: <https://react.dev/>
- Node.js Documentation: <https://nodejs.org/en/docs/>
- JWT Standard: <https://jwt.io/>
- bcrypt: <https://www.npmjs.com/package/bcrypt>

1.5 Overview

Section 2 provides an overall description of the product, including its features, user classes, and operating environment. Section 3 details all functional and non-functional requirements. Section 4 outlines the technology stack and architectural overview. Section 5 presents the Agile development plan with sprint-wise deliverables. Section 6 describes acceptance criteria, and Section 7 provides the conclusion.

2. Overall Description

2.1 Product Perspective

The Neighborhood Service Marketplace is a standalone web application built on the MERN stack. It serves as a two-sided marketplace connecting service-seeking customers with skilled local service providers. The system uses a bid-based model where customers post service requests with budget ranges, and providers submit competitive proposals. The platform does not process payments directly in its initial release but manages the full service lifecycle from request to completion and review.

2.2 Product Features

- Role-Based User Management: Separate registration, login, and dashboards for Customers, Providers, and Administrators.
- Provider Admin Approval: Providers require administrator approval before they can log in and offer services.
- Provider Profiles & Portfolios: Providers can build detailed profiles with bio, experience, service categories, pricing, service areas, and portfolio images.
- Service Request & Bidding: Customers post requests; providers place competitive bids; customers accept or reject.
- Booking Lifecycle Management: Bookings progress through Pending, Confirmed, In Progress, and Completed states.
- Booking Cancellation & Rescheduling: Customers and providers can cancel or request reschedules with structured approval flows.
- Ratings & Reviews: Post-service review system that builds provider reputation.
- Admin Panel: Full control over users, provider approvals, and service category management.

2.3 User Classes and Characteristics

- Customers: Individuals seeking neighborhood services. Non-technical users who need a simple interface to post requests, compare bids, and manage bookings.
- Providers: Local skilled workers or businesses offering services. Require an interface to manage their profile, browse requests, submit bids, and track jobs.
- Administrators: Platform operators responsible for approving providers, managing categories, and maintaining user accounts. Have full access to the admin panel.

2.4 Operating Environment

- Web Application: Accessible on modern web browsers (Chrome, Firefox, Edge, Safari).
- Mobile Compatibility: Fully responsive design for smartphones and tablets.
- Server-Side: Node.js and Express.js running in a cloud or containerized environment.
- Database: MongoDB 5+ cluster, preferably cloud-managed (e.g., MongoDB Atlas).
- Hosting: Deployable on AWS, Azure, Google Cloud, or equivalent cloud platforms.

2.5 Constraints

- Security: Must implement bcrypt password hashing, JWT authentication, HTTPS, and CORS policies.

- **Provider Approval Workflow:** Providers cannot access the platform until approved by an administrator.
- **Image Constraints:** Portfolio images limited to JPEG/PNG, max 5MB per image, max 10 images per provider. Request attachments limited to max 5 images.
- **Performance:** Pages must load within 3 seconds; search queries must complete within 2 seconds.
- **Scalability:** Architecture must support horizontal scaling and MongoDB indexing for large datasets.
- **Time & Resource:** Delivered in approximately 8–9 weeks with the project team.

2.6 Assumptions and Dependencies

- Users have a stable internet connection to access the web application.
- Providers are responsible for fulfilling service commitments made through the platform.
- Email service is available for notifications (e.g., bid accepted/rejected, booking status changes).
- All users interact via modern, standards-compliant web browsers.
- The administrator actively monitors and approves provider registrations in a timely manner.

3. System Requirements

3.1 Functional Requirements

Functional Requirements

FR-1: User Profile Management (Feature 1)

- FR-1.1: System shall allow users to register with name, email, password, phone, and address
- FR-1.2: System shall allow users to select role (Customer or Provider) during registration
- FR-1.3: System shall allow users to view their profile information
- FR-1.4: System shall allow users to edit their profile (name, phone, address, profile photo)
- FR-1.5: System shall validate email format and phone number format
- FR-1.6: System shall upload and store profile photos

FR-2: Role-based Dashboard (Feature 2)

- FR-2.1: System shall display Customer dashboard with active requests, received bids, and upcoming bookings
- FR-2.2: System shall display Provider dashboard with available requests, placed bids, and scheduled bookings
- FR-2.3: System shall display different navigation menus based on user role
- FR-2.4: System shall show summary statistics relevant to each role
- FR-2.5: System shall display recent activity timeline

FR-3: Account Settings (Feature 3)

- FR-3.1: System shall allow users to change their password
- FR-3.2: System shall allow users to update email preferences
- FR-3.3: System shall allow users to configure notification settings
- FR-3.4: System shall allow users to deactivate their account
- FR-3.5: System shall validate old password before allowing password change

FR-4: Provider Profile Creation & Management (Feature 4)

- FR-4.1: System shall allow providers to create detailed profile with bio, experience, and specializations
- FR-4.2: System shall allow providers to set hourly rate
- FR-4.3: System shall allow providers to specify service areas
- FR-4.4: System shall allow providers to edit their provider profile
- FR-4.5: System shall validate that only users with "provider" role can create provider profiles

FR-5: Service Category Management - Provider Side (Feature 5)

- FR-5.1: System shall display all available service categories to providers
- FR-5.2: System shall allow providers to select multiple service categories they offer
- FR-5.3: System shall allow providers to set price range for each service category
- FR-5.4: System shall allow providers to add service descriptions
- FR-5.5: System shall allow providers to remove service categories

FR-6: Portfolio Management (Feature 6)

- FR-6.1: System shall allow providers to upload portfolio images (max 10 images)
- FR-6.2: System shall allow providers to add descriptions to portfolio images
- FR-6.3: System shall allow providers to delete portfolio images
- FR-6.4: System shall allow providers to reorder portfolio images
- FR-6.5: System shall validate image file types (JPEG, PNG only)
- FR-6.6: System shall limit image file size to 5MB per image

FR-7: Browse & Search Service Providers (Feature 7)

- FR-7.1: System shall display all active service providers in a grid/list view
- FR-7.2: System shall allow users to search providers by service type
- FR-7.3: System shall allow users to search providers by name
- FR-7.4: System shall allow users to search providers by location
- FR-7.5: System shall display provider card showing name, rating, services, and price range
- FR-7.6: System shall implement pagination for provider listings

FR-8: View Provider Profile Details (Feature 8)

- FR-9.1: System shall display complete provider information (bio, experience, services)
- FR-9.2: System shall display provider's portfolio gallery
- FR-9.3: System shall display provider's average rating and total reviews
- FR-9.4: System shall display total jobs completed by provider
- FR-9.5: System shall display all reviews and ratings for the provider
- FR-9.6: System shall allow guests and logged-in users to view provider profiles

FR-9: Create Service Request (Feature 9)

- FR-10.1: System shall allow customers to create service requests with title and description
- FR-10.2: System shall allow customers to select service category
- FR-10.3: System shall allow customers to set preferred date for service
- FR-10.4: System shall allow customers to set budget range (min-max)
- FR-10.5: System shall allow customers to upload images (optional, max 5 images)
- FR-10.6: System shall allow customers to specify service location
- FR-10.7: System shall validate that only customers can create service requests
- FR-10.8: System shall set request status to "open" upon creation

FR-10: View My Service Requests (Feature 10)

- FR-11.1: System shall display all service requests created by the customer
- FR-11.2: System shall show request status (open, bidding, assigned, completed, cancelled)
- FR-11.3: System shall show number of bids received for each request
- FR-11.4: System shall allow customers to filter requests by status
- FR-11.5: System shall allow customers to view request details
- FR-11.6: System shall allow customers to edit requests if no bids received
- FR-11.7: System shall allow customers to delete requests if no bids received

FR-11: Browse Available Service Requests (Feature 11)

- FR-12.1: System shall display all open service requests to providers
- FR-12.2: System shall allow providers to filter requests by service category
- FR-12.3: System shall allow providers to filter requests by budget range
- FR-12.4: System shall allow providers to filter requests by location
- FR-12.5: System shall allow providers to filter requests by date posted
- FR-12.6: System shall display request details including customer info and budget
- FR-12.7: System shall indicate if provider has already bid on a request

FR-12: Place Bid on Service Request (Feature 12)

- FR-13.1: System shall allow providers to place bids on open service requests
- FR-13.2: System shall require providers to enter proposed price
- FR-13.3: System shall require providers to enter estimated duration
- FR-13.4: System shall allow providers to add detailed message/proposal
- FR-13.5: System shall prevent providers from bidding on their own requests
- FR-13.6: System shall allow providers to edit bids before customer views them
- FR-13.7: System shall allow providers to withdraw bids
- FR-13.8: System shall update request status to "bidding" when first bid is placed

FR-13: View Received Bids - Customer (Feature 13)

- FR-14.1: System shall display all bids received for a service request
- FR-14.2: System shall show provider name, rating, proposed price, and duration for each bid
- FR-14.3: System shall display bid message/proposal
- FR-14.4: System shall allow customers to view bidder's profile
- FR-14.5: System shall allow customers to sort bids by price (low-high)
- FR-14.6: System shall allow customers to sort bids by rating (high-low)
- FR-14.7: System shall allow customers to sort bids by date submitted

FR-14: Accept/Reject Bids (Feature 14)

- FR-15.1: System shall allow customers to accept one bid
- FR-15.2: System shall automatically reject all other bids when one is accepted
- FR-15.3: System shall allow customers to manually reject individual bids
- FR-15.4: System shall create a booking automatically when a bid is accepted
- FR-15.5: System shall update request status to "assigned" when bid is accepted
- FR-15.6: System shall send notification to provider when their bid is accepted/rejected
- FR-15.7: System shall prevent accepting multiple bids for the same request

FR-15: View All Bookings (Feature 15)

- FR-16.1: System shall display all bookings for customers and providers
- FR-16.2: System shall allow users to filter bookings by status (upcoming, ongoing, completed, cancelled)
- FR-16.3: System shall display service title, provider/customer name, date, and status
- FR-16.4: System shall allow users to filter bookings by date range
- FR-16.5: System shall show different views for customers vs providers
- FR-16.6: System shall display total amount for each booking

FR-16: Booking Details & Status Management (Feature 16)

- FR-17.1: System shall display complete booking information
- FR-17.2: System shall show booking status flow (Pending → Confirmed → In Progress → Completed)
- FR-17.3: System shall allow providers to confirm bookings
- FR-17.4: System shall allow providers to mark service as started (In Progress)
- FR-17.5: System shall allow providers to mark service as completed
- FR-17.6: System shall allow customers to confirm service completion
- FR-17.7: System shall show price breakdown
- FR-17.8: System shall display booking timeline with status change history

FR-17: Rate & Review Service Provider (Feature 17)

- FR-19.1: System shall allow customers to rate providers (1-5 stars) after service completion
- FR-19.2: System shall allow customers to write detailed review (optional)
- FR-19.3: System shall allow customers to mark provider as recommended (yes/no)
- FR-19.4: System shall only allow reviews after booking status is "completed"
- FR-19.5: System shall allow customers to edit review within 48 hours
- FR-19.6: System shall prevent multiple reviews for the same booking

FR-18: View Provider Reviews & Ratings (Feature 18)

- FR-20.1: System shall display average rating for provider
- FR-20.2: System shall display total number of reviews
- FR-20.3: System shall display rating breakdown (5-star, 4-star, etc.)
- FR-20.4: System shall display individual reviews with customer name, date, rating, and comment
- FR-20.5: System shall allow sorting reviews (most recent, highest rating, lowest rating)
- FR-20.6: System shall calculate and update average rating automatically

FR-19: Admin - Manage Users (Feature 19)

- FR-21.1: System shall allow admin to view all user accounts
- FR-21.2: System shall allow admin to filter users by role (customer, provider, admin)

- FR-21.3: System shall allow admin to activate/deactivate user accounts
- FR-21.4: System shall allow admin to delete user accounts
- FR-21.5: System shall allow admin to view user details
- FR-21.6: System shall allow admin to change user roles
- FR-21.7: System shall prevent admin from deleting their own account

FR-20: Admin - Manage Service Categories (Feature 20)

- FR-22.1: System shall allow admin to create new service categories
 - FR-22.2: System shall allow admin to edit category name and description
 - FR-22.3: System shall allow admin to upload category icons
 - FR-22.4: System shall allow admin to delete categories (only if no providers assigned)
 - FR-22.5: System shall allow admin to activate/deactivate categories
 - FR-22.6: System shall display total providers count for each category
-

3.2 Non-Functional Requirements

NFR-1: Performance Requirements

- **NFR-1.1:** System shall load pages within 3 seconds under normal network conditions.
- **NFR-1.2:** System shall support up to 1,000 concurrent users.
- **NFR-1.3:** System shall process search queries within 2 seconds.
- **NFR-1.4:** System shall handle image uploads within 5 seconds for files up to 5MB.

NFR-2: Security Requirements

- **NFR-2.1:** System shall encrypt all passwords using bcrypt hashing.
- **NFR-2.2:** System shall use JWT tokens for authentication.
- **NFR-2.3:** System shall implement HTTPS for all communications.
- **NFR-2.4:** System shall validate all user inputs to prevent SQL injection and XSS attacks.
- **NFR-2.5:** System shall implement CORS policy to prevent unauthorized cross-origin access.
- **NFR-2.6:** System shall expire user sessions after 7 days of inactivity.

NFR-3: Usability Requirements

- **NFR-3.1:** System shall have a responsive design compatible with desktop, tablet, and mobile.
- **NFR-3.2:** System shall follow consistent UI/UX patterns across all pages.
- **NFR-3.3:** System shall provide clear error messages for validation failures.
- **NFR-3.4:** System shall have intuitive navigation with breadcrumbs.
- **NFR-3.5:** System shall support modern browsers (Chrome, Firefox, Safari, Edge).

NFR-4: Reliability Requirements

- **NFR-4.1:** System shall have 99.5% uptime.
- **NFR-4.2:** System shall automatically backup database daily.
- **NFR-4.3:** System shall handle errors gracefully without crashing.
- **NFR-4.4:** System shall log all critical errors for debugging.

NFR-5: Scalability Requirements

- **NFR-5.1:** System architecture shall support horizontal scaling.
- **NFR-5.2:** System shall handle growing database size efficiently with indexing.
- **NFR-5.3:** System shall implement pagination for large datasets.

NFR-6: Maintainability Requirements

- **NFR-6.1:** System shall follow MVC architecture pattern.
- **NFR-6.2:** Code shall be well-documented with comments.
- **NFR-6.3:** System shall use meaningful variable and function names.
- **NFR-6.4:** System shall implement modular code structure.
- **NFR-6.5:** System shall use version control (Git).

NFR-7: Data Integrity Requirements

- **NFR-7.1:** System shall validate all data before storing in database.
- **NFR-7.2:** System shall maintain referential integrity using foreign keys.
- **NFR-7.3:** System shall prevent duplicate user registrations with same email.
- **NFR-7.4:** System shall ensure atomic transactions for critical operations.

NFR-8: Compatibility Requirements

- **NFR-8.1:** Backend shall be compatible with Node.js 16+.
- **NFR-8.2:** Frontend shall be compatible with React 18+.
- **NFR-8.3:** Database shall use MongoDB 5+.

- **NFR-8.4:** System shall support image formats: JPEG, PNG, WebP.

3.3 External Interface Requirements

3.3.1 User Interfaces

- **UI-1:** A responsive web interface (React.js) that adjusts to desktop, tablet, and mobile viewports.
- **UI-2:** Intuitive navigation with separate dashboards for each user role (Customer, Provider, Admin).
- **UI-3:** Clear visual feedback for all user actions including loading states and error messages.

3.3.2 Hardware Interfaces

- **HI-1:** None specific; the system will run on common server hardware or cloud-based instances.
- **HI-2:** Camera access may be requested for profile photo uploads via browser permissions.

3.3.3 Software Interfaces

- **SI-1:** Email notification service (e.g., SendGrid, Nodemailer) for bid, booking, and account notifications.
- **SI-2:** Cloud image storage service (e.g., Cloudinary or AWS S3) for profile photos and portfolio images.
- **SI-3:** MongoDB Atlas or equivalent managed database service for persistent data storage.

3.3.4 Communication Interfaces

- **CI-1:** RESTful APIs will be used for all communication between the React.js front-end and the Node.js/Express.js back-end.
- **CI-2:** All API communication shall occur over HTTPS to ensure data security in transit.

4. Technology Stack & Architectural Overview

4.1 MERN Stack Components

- MongoDB: Document-oriented NoSQL database for storing user profiles, service requests, bids, bookings, reviews, and categories.
- Express.js: Node.js web framework for building the RESTful API and handling server-side business logic.
- React.js: Front-end JavaScript library for building a responsive, interactive, and role-aware user interface.
- Node.js: JavaScript runtime environment for executing the back-end application server.

4.2 High-Level Architecture

- Presentation Layer (React.js): Manages all user interactions, form submissions, and dynamic rendering of data from the API. Role-based routing ensures customers, providers, and admins see only their relevant views.
- Business Logic Layer (Express.js / Node.js): Processes incoming API requests, enforces authorization rules, validates data, and orchestrates interactions between the presentation and data layers.
- Data Layer (MongoDB): Stores all persistent data including user accounts, provider profiles, service requests, bids, bookings, reviews, and service categories. Indexed for performance.

4.3 Key Technical Decisions

- Authentication: JWT-based stateless authentication with bcrypt password hashing ensures secure, scalable user sessions without server-side session storage.
- Authorization: Middleware-enforced RBAC restricts API endpoints based on user role (customer, provider, admin).
- Image Storage: Portfolio and profile images stored via cloud storage service with size and type validation enforced server-side.
- Real-time Filtering: Provider search and request browsing support multi-filter, real-time results via efficient MongoDB queries with compound indexes.

5. Tentative Development Plan (Agile Methodology)

The project follows an Agile development methodology with iterative sprints. Each sprint delivers a working, demonstrable set of features that builds upon the previous sprint.

Sprint 1 (Weeks 1–2): Core Setup & Authentication

- Project scaffolding: MERN stack setup, repository structure, environment configuration.
- User registration with role selection (Customer / Provider).
- Provider registration with admin approval workflow.
- Login with JWT-based authentication and bcrypt password hashing.
- Role-based routing and protected routes on the front-end.
- Admin panel foundation: view pending provider registrations, approve/reject.

Sprint 2 (Weeks 3–4): Profiles, Provider Setup & Browse

- User profile view and edit (name, phone, address, profile photo).
- Account settings: password change, email preferences, account deactivation.
- Provider profile creation: bio, experience, hourly rate, service areas.
- Service category selection and pricing configuration for providers.
- Portfolio management: upload, describe, reorder, delete images.
- Browse & search providers with filters (name, location, category, rating, price).
- View detailed provider profiles including portfolio and reviews.

Sprint 3 (Weeks 5–6): Service Requests & Bidding

- Customer: create service requests with title, description, category, budget, date, location, images.
- Customer: view, filter, edit, and delete own service requests.
- Provider: browse and filter open service requests.
- Provider: place, edit, and withdraw bids with proposed price, duration, and proposal message.
- Customer: view received bids, sort by price/rating/date, view bidder profiles.
- Customer: accept or reject bids; auto-booking creation on acceptance.
- Notifications: bid received, bid accepted/rejected.

Sprint 4 (Week 7): Bookings & Status Management

- View all bookings with status filters (upcoming, ongoing, completed, cancelled).
- Full booking detail view with status timeline.
- Provider: confirm booking, mark In Progress, mark Completed.
- Customer: confirm service completion.
- Cancellation workflow with reason capture and 24-hour rule.
- Reschedule request and approval flow for both customers and providers.

- Notifications for all booking status changes.

Sprint 5 (Weeks 8–9): Reviews, Admin & Final Touches

- Post-service review and star rating system (customer rates provider after completion).
- Provider ratings page with breakdown, averages, and sort options.
- Admin: full user management (view, filter, activate/deactivate, role change, delete).
- Admin: service category management (create, edit, icons, activate/deactivate, delete).
- UI/UX polish, responsive design testing across devices and browsers.
- End-to-end testing, bug fixes, and performance optimizations.
- Final deployment and documentation.

6. Acceptance Criteria

The following criteria must be met for the project to be considered complete and accepted:

Authentication & Authorization

- Users can register as Customer or Provider; providers require admin approval before login.
- JWT tokens are issued on login and enforced on all protected routes.
- Each role (Customer, Provider, Admin) accesses only their authorized features and views.

Provider Profile & Discovery

- Providers can create complete profiles with bio, experience, service categories, pricing, service areas, and up to 10 portfolio images.
- Customers can search and filter providers by name, location, category, rating, and price range with results updating in real time.

Service Request & Bidding

- Customers can create, edit (pre-bid), and delete service requests.
- Providers can place, edit (pre-view), and withdraw bids.
- Accepting a bid automatically creates a booking and rejects all other bids.

Booking Lifecycle

- Bookings progress correctly through all statuses: Pending → Confirmed → In Progress → Completed.
- Cancellations and reschedule requests are handled with notifications to both parties.

Reviews & Ratings

- Reviews can only be submitted after booking completion and only once per booking.
- Provider average rating updates automatically after each new review.

Admin Panel

- Admin can manage all users (view, filter, activate/deactivate, role change, delete) and cannot delete their own account.
- Admin can manage service categories (create, edit, icons, activate/deactivate, delete with no assigned providers).

Non-Functional

- All pages load within 3 seconds under normal conditions.
- All passwords are bcrypt-hashed; all communications occur over HTTPS.
- System is fully responsive on desktop, tablet, and mobile devices.
- All critical errors are logged; system handles failures gracefully without crashing.

7. Conclusion

This Software Requirements Specification document presents a comprehensive blueprint for the design, development, and deployment of the Neighborhood Service Marketplace — a platform

built to bridge the gap between local service providers and customers seeking reliable, neighborhood-level assistance. Developed using the MERN stack (MongoDB, Express.js, React.js, Node.js), the system is designed to be scalable, secure, and user-friendly, accommodating the diverse needs of customers, providers, and administrators alike.

The platform addresses a practical, real-world need: connecting people who require neighborhood services — such as cleaning, electrical work, plumbing, and painting — with qualified, vetted local providers. By implementing a bid-based service request model, the marketplace empowers customers to describe their needs, set budgets, and select from competing provider bids, ensuring transparent pricing and informed decision-making on both sides

SPRINT 4

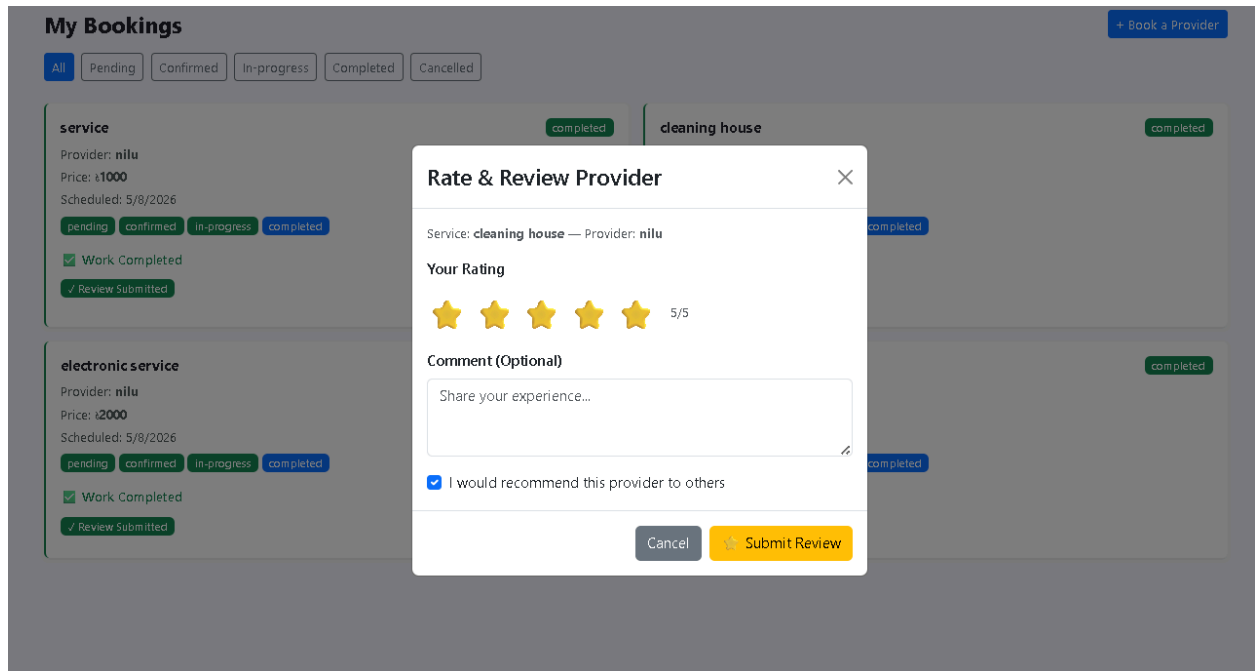

FR-16: Booking Details & Status Management (Feature 16)

The screenshot displays the 'My Bookings' section of a web application. At the top, a blue navigation bar contains the title 'My Bookings' and three links: 'Dashboard', 'My Requests', and 'Logout'. Below this, a sub-header 'My Bookings' is followed by a '+ Book a Provider' button. A filter bar shows tabs for 'All', 'Pending', 'Confirmed', 'In-progress', 'Completed', and 'Cancelled', with 'All' currently selected. The main content area features four booking cards, each representing a completed service:

- service**: Provider: nilu, Price: ₹1000, Scheduled: 5/8/2026. Status: completed. Includes buttons for 'pending', 'confirmed', 'in-progress', and 'completed'. Checkmarks for 'Work Completed' and 'Review Submitted' are shown.
- cleaning house**: Provider: nilu, Price: ₹1000, Scheduled: 5/8/2026. Status: completed. Includes buttons for 'pending', 'confirmed', 'in-progress', and 'completed'. Checkmarks for 'Work Completed' and 'Review Submitted' are shown, along with a '★ Leave a Review' button.
- electronic service**: Provider: nilu, Price: ₹2000, Scheduled: 5/8/2026. Status: completed. Includes buttons for 'pending', 'confirmed', 'in-progress', and 'completed'. Checkmarks for 'Work Completed' and 'Review Submitted' are shown.
- Electrical**: Provider: nilu, Price: ₹500, Scheduled: 4/26/2026. Status: completed. Includes buttons for 'pending', 'confirmed', 'in-progress', and 'completed'. Checkmarks for 'Work Completed' and 'Review Submitted' are shown.

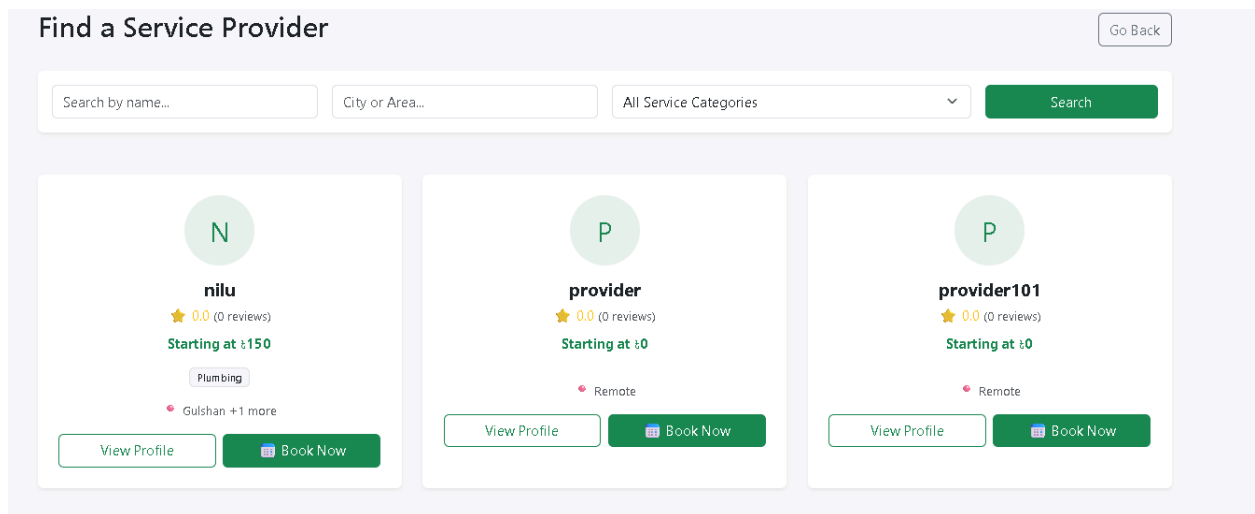

Booking status of complete, pending from customer side
